

RBT Assessment

FunPrep Cheat Sheet

ABC DATA

Antecedent, Behavior, Consequence. Your first tool for understanding behavior.

PREFERENCE ASSESSMENT

Find what the learner actually wants to work for. Never assume.

PAIRED STIMULUS

Present two items, learner picks one. Gives a clear preference ranking but takes the longest.

MSWO

Multiple stimulus without replacement. Line items up, pick one, remove it, repeat.

SINGLE STIMULUS

Present one item at a time. Note approach or avoidance. Good for learners who can't yet choose between two items.

FBA ROLE

You collect the data. The BCBA analyzes it and writes the plan.

EXAM TRAP

Preference assessments find reinforcers. They do NOT identify the function of behavior.
